

3 Radi log system

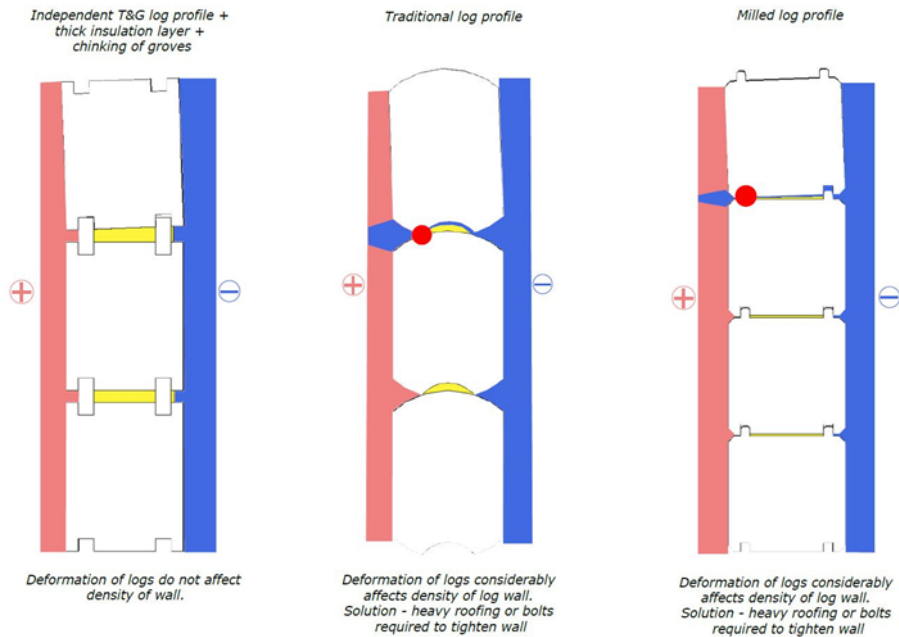

3RADI log wall with massive stud corner joint (wall do not settles at all)

system provides truly ecological, weathertight log structure, avoiding of use of glue laminated wood (syntetic adhesives) and steel ties. lateral groove system evens affect of deformations of massive logs to buildings weathertightness

3RADI log wall with cross corner joint (wall settles about 3% of its initial height)

lateral groove insulation

and chinking of lateral groove
